In physics, the Navier–Stokes equations (*/ n æ v ? j e? s t o? k s /*), named after Claude-Louis Navier and George Gabriel Stokes, describe the motion of viscous fluid substances.. These balance equations arise from applying Isaac Newton's second law to fluid motion, together with the assumption that the stress in the fluid is the sum of a diffusing viscous term (proportional to the ...

History. Historically, equations of motion first appeared in classical mechanics to describe the motion of massive objects, a notable application was to celestial mechanics to predict the motion of the planets as if they orbit like clockwork (this was how Neptune was predicted before its discovery), and also investigate the stability of the solar system.
