

KINETIC SOLUTIONS INTERNATIONAL INC

kinetic solutions international inc pdf

A kinetic energy recovery system (often known simply as KERS) is an automotive system for recovering a moving vehicle's kinetic energy under braking. The recovered energy is stored in a reservoir (for example a flywheel or high voltage batteries) for later use under acceleration. Examples include complex high end systems such as the Zytec, Flybrid, Torotrak and Xtrac used in Formula One racing ...

In fluid dynamics, turbulence kinetic energy (TKE) is the mean kinetic energy per unit mass associated with eddies in turbulent flow. Physically, the turbulence kinetic energy is characterised by measured root-mean-square (RMS) velocity fluctuations. In Reynolds-averaged Navier Stokes equations, the turbulence kinetic energy can be calculated based on the closure method, i.e. a turbulence model.

Radar Solutions. Mercury's rugged and dense Ensemble 3U and 6U OpenVPX and AdvancedTCA radar compute building blocks feature the most efficient cooling technology and fastest, software-defined switch fabrics to deliver the highest embedded signal processing capability in the industry today. These building blocks are optimized for SWaP performance and processing density, leveraging such ...
