Paul Wilmott introduces Quantitative Finance - UNTAG

Algorithmic trading is a method of executing a large order (too large to fill all at once) using automated pre-programmed trading instructions accounting for variables such as time, price, and volume to send small slices of the order (child orders) out to the market over time. They were developed so that traders do not need to constantly watch a stock and repeatedly send those slices out manually.

Algorithmic trading - Wikipedia

In macroeconomics and international finance, the capital account is one of two primary components of the balance of payments, the other being the current account. Whereas the current account reflects a nation's net income, the capital account reflects net change in ownership of national assets. A surplus in the capital account means money is flowing into the country, but unlike a surplus in the ...

Capital account - Wikipedia

Inversión extranjera directa (IED): se refiere a la inversión de capital a largo plazo en la compra o construcción de maquinarias, edificios, o incluso plantas de producción. Si los extranjeros están invirtiendo en un país, existe un flujo de entrada y cuenta como un elemento de superávit en la cuenta de capital.
