CS-102 Logical Organization of Computers . Aims There are two views of computer architecture. The traditional view, dating back to the IBM System/360 from the early 1960's, is that the architecture of a computer is the programmer-visible view of the machine, while its implementation is the province of the hardware designer.

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.

This guide stresses the systematic causal analysis of gender inequality. The analytical questions raised and the readings listed

consider why and how gender inequality arises, varies across and within societies, persists over generations, produces conformity by individuals and institutions, resists change, and sometimes changes dramatically.

What Causes Gender Inequality? - Analytical Strategies

Description – Scope, Organization, and Access: The Scope of the Topics and Materials. We know a lot about gender inequality – its history, how people experience it in their lives, the ways it varies in intensity and form across time and place, the beliefs that make it seem natural, and much more.

What Causes Gender Inequality? -- Robert Max Jackson

By Megan Stacey, The London Free Press. We asked city council candidates in the 2018 municipal election to answer a survey to help illuminate their stances on key issues.
