Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.

2. Meta-Analytic Strategy. The effect size estimate used here was d , which is the difference between the means for two groups divided by a pooled standard deviation and corrected for small sample bias (Hedges & Olkin, 1985). We subtracted the control group mean from the mean for the implementation intention group so that a positive d value indicates the benefit in performance conferred by ...
