In mathematics and computer science, an optimization problem is the problem of finding the best solution from all feasible solutions. Optimization problems can be divided into two categories depending on whether the variables are continuous or discrete. An optimization problem with discrete variables is known as a discrete optimization. In a discrete optimization problem, we are looking for an ...

Traffic congestion is a condition on transport networks that occurs as use increases, and is characterised by slower speeds, longer trip times, and increased vehicular queuing. When traffic demand is great enough that the interaction between vehicles slows the speed of the traffic stream, this results in some congestion.

THE EMERGING CHOICE FOR INTERSECTION DESIGN. The modern roundabout differs from those built early in this century. Modern roundabouts operate on the 'yield to traffic in the circle' rule, have entry deflection to slow vehicles, and can have flared entry points to increase capacity. In addition, they are relatively small and low speed.
