The second moment of area for an arbitrary shape  $R$  with respect to an arbitrary axis  $x$  is defined as  $I_x = \int_R y^2 dA$  where  $dA$  is the differential area of the arbitrary shape, and  $y$  is the distance from the axis  $x$  to  $dA$ . For example, when the desired reference axis is the  $x$ -axis, the second moment of area (often denoted as  $I_x$ ) can be computed in Cartesian coordinates as

The college premium, as a summary measure of the market price of skills, is affected by, among other things, the relative supply of skills. Figure 2 depicts the evolution of the relative supply of college versus non-college educated workers. We use a standard measure of college/non-college relative supply calculated in "efficiency units" to adjust for changes in labor force composition. 12 ...
